Source: AR2025 Note 37, team analysis

We initiate coverage on PT Alamtri Resources Indonesia Tbk. (**IDX: ADRO**) with a **BUY** recommendation and a fair value of **IDR 3,354**, which is **+22.4%** against the closing price of IDR 2,740 on 3 September 2026. The valuation is the equal weighting of two discounted cash flow variants and two target-multiple approaches.

The company you are buying today did not exist two years ago

On **9 December 2024** the company lost control of PT Adaro Andalan Indonesia, the thermal-coal pillar, and with it roughly two-thirds of its revenue. FY2023 revenue is **US\$6,518mn** as originally reported and **US\$2,135mn** on the continuing basis — the same year, the same company, two numbers that differ by US\$4,382mn. Any five-year chart of this business that does not break at that date is describing something that no longer exists. This report keeps the two bases strictly apart.

FY2025 was the trough, and the reason is entirely price

Revenue fell **9.9%** to US\$1,874mn. The decomposition is unusually clean because the company discloses both segment revenue and sales volume. Implied metallurgical-coal ASP fell from **US\$205.22/t to US\$153.88/t**, a decline of **-25.0%** — which we derive from the accounts and which matches management's stated figure exactly. Volume added **US\$135mn**; price removed **US\$322mn**, or **2.4 times as much**.

This matters for how the trough is read. Production grew **45%** in two years, unit cash cost fell in **both** of them, and the company still posted its weakest year of the five. Nothing management did to volume or cost could offset a 25% move in the price they sell at. The operational performance was real; it was not the variable that mattered.

The aluminium smelter is the entire re-rating case

KAL's **500,000 tpa** smelter in North Kalimantan began partial testing and commissioning in **4Q25**, and management targets full potline capacity by **end-2026**. It is built and largely paid for: fixed assets rose **54%** to **US\$2,361mn** in FY2025, and that spending is what pushed free cash flow negative for the first time in the series. On our ramp assumptions the smelter contributes **US\$910mn** of revenue by FY2027 — close to half the entire FY2025 group top line, from an asset that generated nothing in FY2025.

The rating in one sentence. The market is capitalising trough earnings from a business whose largest new asset is finished but not yet earning; at **4.0x** FY2027E EV/EBITDA and **8.7x** earnings, the smelter is close to free. The risk is not solvency — net cash is US\$223mn and interest cover is 28x — it is that the ramp slips and the re-rating never comes.

COMPANY PROFILE AND SEGMENT STRUCTURE

Figure 4: Forecast revenue by segment (US\$ mn)

Source: Team analysis

Figure 5: Gross and EBITDA margin (%)

Source: AR2021-AR2025

Alamtri is now three businesses. **Metallurgical coal** (AMI, through Maruwai Coal and Lahai Coal) sold 6.28 Mt in FY2025 and is the price-exposed earnings engine. **Mining services** (SIS) is a contractor that moved 201.01 Mbcm of overburden and 66.55 Mt of coal, and is now the larger segment by consolidated revenue at 53.7%. **Aluminium** (KAI) is pre-revenue and is the reason to own the stock.

The segment mix has inverted since FY2021, when coal and mining was 96.1% of consolidated revenue and services 16.6%. On **external** revenue alone mining is still marginally ahead — US\$966mn against US\$865mn — and the gap is US\$141mn of inter-segment work SIS performs for the group. That inter-segment dependency is worth watching: it means the services segment's reported growth is not fully arm's-length.

Where the margin actually leaked in FY2025

Segment COGS (US\$'000)	FY2024	FY2025	Change	Reading
Mining	573,582	574,541	+0.2%	Cost flat on 12% more volume
Mining services	728,202	764,815	+5.0%	Cost grew 2.6x faster than revenue

Mining did what it should: absolute cost flat while volume rose 11.7%, so unit COGS fell from US\$102.06 to US\$91.49 per tonne, a **10.4%** decline. The leak is in services, where cost grew 5.0% against external revenue growth of 1.9%. Because services is now the larger segment, that gap compounds.

INDUSTRY AND MACRO BACKDROP

Figure 6: Crude steel production (Mt)

Source: World Steel Association

Figure 7: Coal and aluminium prices (US\$/t)

Source: World Bank CMO, nominal

Metallurgical coal demand is a derivative of steel, and the steel picture is a tale of two countries. Chinese crude steel output fell from **1,035 Mt in 2021 to 961 Mt in 2025**, a 7.2% decline that management attributes directly to the slowdown in China's property and infrastructure sectors. Over the same period India rose from **118 Mt to 166 Mt**, up 40.1%, and Indonesia from 14.8 Mt to 20.0 Mt.

That substitution is the structural argument for the met-coal price stabilising rather than continuing to fall, and it is the basis for our assumption of one further down year followed by flat-to-modest recovery. It is an argument, not a certainty: India's absolute tonnage is still a sixth of China's, so the arithmetic of the substitution does not yet work in Alamtri's favour on volume alone.

Aluminium is the more constructive of the two commodity exposures. The World Bank annual average rose from **US\$2,256/t in 2023 to US\$2,632/t in 2025**, and Indonesia is adding installed capacity — expected to reach 1.75 Mt in 2026 including Alamtri's own plant — into a market where the country remains a net importer. The company's stated purpose for the smelter is import substitution under the government's downstream programme, which gives the project a policy tailwind that the coal business does not have.

What the macro does not support. Nothing in the steel data argues for a coal-led re-rating. The bull case here is specific to the smelter and to cost discipline in mining, not to a recovery in the commodity Alamtri currently sells most of.

FINANCIAL ANALYSIS: FIVE YEARS, TWO COMPANIES

Figure 8: Free cash flow (US\$ mn)

Source: AR2021–AR2025, team analysis

Figure 9: Key ratios, FY2025

Source: Team analysis on AR2025

Gross margin	34.0%
EBITDA margin	41.2%
Net margin (cont. ops)	26.1%
ROE (owners)	9.5%
Current ratio	2.56x
Debt / equity	0.16x
Net cash (US\$ mn)	223
Interest cover	28x

The five-year series cannot be read as one series. FY2021–FY2023 is the group with thermal coal; FY2023–FY2025 is continuing operations only. FY2023 is the single overlap year and the only place the two can be compared. Every table below states which basis it uses.

On the continuing basis, the trajectory is a compressing business that has been spending heavily:

Continuing operations (US\$'000)	FY2023	FY2024	FY2025
Revenue	2,135,412	2,078,689	1,873,528
Gross profit	867,681	873,999	636,636
Operating income (EBIT)	764,935	711,401	517,575
EBITDA (EBIT + D&A)	988,947	938,949	771,799
Profit from continuing operations	653,306	637,484	489,845
Free cash flow	567,476	1,179,561	(207,442)

Free cash flow turned negative in FY2025 for the first time, at **US\$(207)mn**. This is not a deterioration in the operating business — cash from operations was still US\$594mn — it is capital expenditure of **US\$802mn**, of which the bulk is the smelter. Capex was 42.8% of revenue and above 100% of EBITDA. That is the shape of a company finishing a large project, and it should reverse: management guides FY2026 capex to **US\$400–420mn**, roughly half the FY2025 level.

The balance sheet is the reason the thesis survives a delay

Net cash of **US\$223mn**, debt/equity of **0.16x**, and interest coverage of **28x**. Net cash has thinned considerably — it was US\$2,485mn at end-FY2022 — but the deleveraging through FY2024 came from the AAI disposal and the US\$750mn Senior Notes repayment, and the FY2025 increase in debt is bank facilities funding the smelter, with non-current bank loans up 63% to US\$704mn. A slow ramp is a delay to the thesis, not a solvency question.

One reconciliation we could not close. Total debt computed from the balance sheet exceeds the interest-bearing debt figure the company publishes by 0.6–1.1% through FY2023 and by 5.8% and 4.6% in FY2024–25. Our figure ties exactly to the AR2025 Note 35b financing reconciliation; the company's appears only as a chart with no breakdown. We use the computed figure and disclose the gap rather than close it by assumption.

FORECAST FY2026E-FY2030E

Figure 10: Smelter revenue and utilisation

Source: Team analysis; capacity per AR2025

The forecast is built segment by segment on the continuing basis. Every projected line is a function of an assumption; nothing is entered directly. The assumptions that carry the model are below, with the ones we would argue about marked.

Driver	26E	27E	28E	29E	30E	Basis
Met-coal sales volume (Mt)	6.8	7.3	7.7	8.0	8.2	6.28 Mt in FY2025
Met-coal ASP change	-5%	2%	2%	2%	2%	One more down year, then flat
Smelter utilisation	25%	70%	90%	95%	95%	The swing assumption
Aluminium price (US\$/t)	2,600	2,600	2,650	2,700	2,750	2025 World Bank avg US\$2,632
Capex (US\$'000)	410,000	280,000	260,000	260,000	270,000	FY26 = midpoint of company guidance

Projected P&L (US\$'000)	26E	27E	28E	29E	30E
Revenue	2,276,234	3,011,229	3,416,202	3,617,606	3,740,905
Gross profit	719,739	903,883	1,044,793	1,123,847	1,177,909
EBITDA	905,309	1,126,434	1,276,393	1,370,231	1,434,977
Profit for the year	526,647	637,147	748,315	820,985	870,382
Free cash flow	384,430	653,348	825,917	929,872	990,518

Revenue reaches **US\$3,741mn** by FY2030E, roughly double the FY2025 base, and almost all of the increase is the smelter plus recovery in met-coal price. Free cash flow turns positive in FY2026E at **US\$384mn** and reaches **US\$826mn** by FY2028E as capex normalises.

The utilisation path — 25% in the first full year, then 70% and 90% — is a conventional greenfield smelter curve. It is **not** company guidance, and it is the single assumption to which the rating is most sensitive.

VALUATION

Figure 11: Valuation range by method (IDR/share)

Source: Team analysis

Figure 12: Cost of capital

Source: Team analysis

Risk-free rate	5.50%
Equity risk + country premium	7.50%
Beta	1.15
Cost of equity	14.12%
After-tax cost of debt	4.80%
Weights (E / D)	85% / 15%
WACC	12.73%

DCF bridge (US\$'000)	Value
PV of explicit FCFF, FY2026E-FY2030E	2,438,654
PV of terminal value	4,953,240
Enterprise value	7,391,894
Add: net cash	222,859
Less: non-controlling interests	(518,530)
Equity value to owners	7,096,223

Fair value of **IDR 3,354** is the equal weighting of the Gordon-growth DCF (IDR 4,120), an exit-multiple DCF (IDR 3,304), and target multiples of 4.0x and 5.0x FY2027E EV/EBITDA (IDR 2,669 and 3,323).

The honest weakness in this DCF. Terminal value is **67%** of enterprise value. That is high, and it is a direct consequence of forecasting a business whose largest asset only starts earning in year two of the explicit period. A reader who discounts the terminal assumption should weight the multiple-based approaches more heavily — which is why they carry half the fair value here.

Two EBITDA definitions, and why it changes a multiple

The annual report says EBITDA fell 19% in FY2025. This model says 17.8%. Both are correct. The company defines EBITDA from profit for the year excluding D&A, tax, finance items and forex, which keeps joint-venture profit in and strips forex out; EBIT plus D&A does the opposite. On FY2025 the two differ by **US\$27mn, or 3.5%** — enough to move EV/EBITDA from **5.83x to 5.63x**. Every multiple in this report uses EBIT plus D&A. Anyone comparing them with a broker screen should check which EBITDA that screen uses first.

RISKS AND RATING

Figure 13: Rating bands

Source: Team methodology

BUY	above +15%
HOLD	–10% to +15%
SELL	below –10%
This report	BUY (+22.4%)

Figure 14: What breaks the call

Source: Team analysis

Smelter to 4.0x target	IDR 2,669
WACC 14.5%, g 1.5%	IDR 3,359
WACC 10.5%, g 2.5%	IDR 5,619

The case for

The smelter is **built and largely paid for**. The spending that depressed FY2025 free cash flow is behind the company, and the revenue it was meant to produce is ahead of it. The market is capitalising trough earnings: on FY2027E the stock trades at 4.0x EV/EBITDA. The balance sheet absorbs a disappointment — net cash US\$223mn, debt/equity 0.16x, interest cover 28x. And volume and cost are both moving the right way: production up 45% in two years, unit cash cost down in each of the last two.

The case against, stated as plainly as the case for

Fair value implies about **5.0x** FY2027E EV/EBITDA. This asset has traded between 3.75x and 4.05x since the divestment. The upside therefore requires a re-rating the market has not previously granted. Hold the target multiple at 4.0x and fair value falls to **IDR 2,669** — which is a HOLD, not a BUY.

Terminal value is 67% of enterprise value. Smelter cash cost per tonne — a primary driver of smelter profitability — **is not disclosed anywhere by the company** and is our estimate; there is no historical data against which to test it, because the plant has never run at scale. And the met-coal price assumption rests on Indian steel growth offsetting Chinese decline, which the tonnage does not yet do.

What would change the rating	Direction
Smelter utilisation materially below 25% in FY2026 or 70% in FY2027	Downgrade
Met-coal ASP falling a further 10%+ in FY2026	Downgrade
Capex exceeding guidance, signalling smelter cost overrun	Downgrade
Disclosure of smelter unit economics at or better than assumed	Confidence up
Sustained re-rating above 5.0x EV/EBITDA on delivery	Target up

Conclusion. BUY with a fair value of **IDR 3,354**, +22.4% against the current price. This is a rating on execution, not on the coal cycle. If KAI ramps roughly on schedule, the current price is capitalising a company that is about to stop existing in its present form. If it does not, this is a fairly valued met-coal miner with an expensive idle asset and the rating should be HOLD.

Prepared from the company's annual reports FY2021–FY2025, the FY25 Public Expose, World Bank commodity data, World Steel Association production data, Bank Indonesia JISDOR and exchange price history. All financial figures traced to source pages; every statement and bridge in this report reconciles to the reported accounts. This is not investment advice.

APPENDIX A — HISTORICAL FINANCIAL STATEMENTS

The two income-statement tables below do not share columns, and that is deliberate. Basis A is the group as originally reported, with the thermal-coal subsidiary consolidated; it exists for FY2020–FY2023 only, because the subsidiary left the group in December 2024 and no later accounts were ever prepared on that basis. Basis B is continuing operations, and it exists only from FY2023, because the company re-presented that year and did not restate the ones before it. FY2023 is the single year that appears in both, and it is the only place the two can be compared: US\$6,517,556 thousand as reported against US\$2,135,412 thousand continuing.

Income statement — Basis A (as reported, including thermal coal)

US\$'000	2020	2021	2022	2023
Revenue	2,534,842	3,992,718	8,102,399	6,517,556

Net debt / (net cash)	334,374	(203,808)	(2,484,713)	(1,871,976)	(826,073)	(222,859)

Source: AR2021 p255-257 through AR2025 p302-304. Computed debt is leases plus bank loans plus notes plus third-party loans, and ties exactly to the AR2025 Note 35b financing reconciliation.

Cash flow, with the bridge that makes it tie

Operating, investing and financing cash flow do not sum to the movement in cash in any year of this series. Two disclosed lines close the gap: the foreign-exchange effect, and in FY2024 the US\$1,681,054 thousand of cash that left the group when the thermal-coal subsidiary was deconsolidated. With both included, every year ties to the balance sheet exactly.

US\$'000	2021	2022	2023	2024	2025
Net cash from operating activities	1,436,332	3,864,254	1,152,758	2,016,146	594,125
Net cash from/(used in) investing	(644,612)	(767,196)	(582,426)	1,434,295	(531,370)
Net cash used in financing	(153,422)	(798,315)	(1,333,690)	(3,642,189)	(405,079)
Capex (fixed assets + mining properties)	(179,966)	(401,985)	(585,282)	(836,585)	(801,567)

APPENDIX B — RATIO ANALYSIS

FY2021–FY2023 are computed on Basis A and FY2024–FY2025 on Basis B, so the series is not continuous and the break is marked. FY2024 return measures are inflated by US\$918,648 thousand of discontinued-operations profit and are not a clean read on the continuing business; FY2025 is the first year that is.

Ratio	2021 (A)	2022 (A)	2023 (A)	2024 (B)	2025 (B)
Gross margin	44.3%	57.4%	38.9%	42.0%	34.0%
EBITDA margin (EBIT + D&A)	50.5%	59.6%	38.0%	45.2%	41.2%
EBIT margin	38.3%	53.2%	33.1%	34.2%	27.6%
Net margin (continuing-ops profit / revenue)	25.8%	34.9%	28.5%	30.7%	26.1%
ROA (total NI / avg total assets)	14.7%	30.8%	17.5%	18.1%	7.2%
ROE (owners / avg equity owners)	23.8%	49.1%	25.7%	23.6%	9.5%
Current ratio	2.08x	2.17x	2.01x	4.02x	2.56x
Quick ratio	1.92x	1.98x	1.83x	3.76x	2.35x
Cash ratio	1.33x	1.66x	1.55x	2.17x	1.21x
Debt / equity	0.36x	0.24x	0.19x	0.11x	0.16x
Net debt / EBITDA	-0.10x	-0.51x	-0.76x	-0.88x	-0.29x
Interest coverage (EBIT / finance costs)	18.34x	48.24x	19.70x	13.14x	27.97x
Capex / revenue	4.5%	5.0%	9.0%	40.2%	42.8%
Capex / EBITDA	8.9%	8.3%	23.7%	89.1%	103.9%
CFO / net income	1.40x	1.36x	0.62x	1.30x	1.21x

DuPont decomposition

The return decline is an asset-efficiency story rather than a leverage story. Asset turnover fell 51.6% between FY2021 and FY2025 while the equity multiplier fell from 1.66x to 1.30x, meaning the company reduced its reliance on debt over the same period. The group now carries US\$6,817mn of assets, of which US\$2,361mn is a largely pre-revenue smelter, against US\$1,874mn of revenue.

Component	2021 (A)	2022 (A)	2023 (A)	2024 (B)	2025 (B)
Net profit margin (TOTAL profit incl. discontinued)	25.8%	34.9%	28.5%	74.9%	26.1%
Asset turnover	0.57x	0.88x	0.61x	0.24x	0.28x
Equity multiplier	1.66x	1.67x	1.53x	1.34x	1.30x
ROE (product of the three)	24.5%	51.5%	26.6%	24.4%	9.4%

This row uses total profit, so it is not the same measure as the net margin in the table above, which uses continuing-operations profit. Both are correct; only FY2024 shows a material gap between them (74.9% against 30.7%).

APPENDIX C — SEGMENT DETAIL AND FY2025 VARIANCE

Segment revenue

US\$'000	2021	2022	2023	2023 (c)	2024 (c)	2025
Coal mining & trading	3,837,596	7,936,356	6,318,210	1,084,004	1,151,940	968,800
Mining services	660,817	926,769	1,077,526	1,071,965	970,001	1,006,336
Logistics	321,368	423,517	523,328	0	0	0
Others	131,636	119,496	133,814	81,055	83,071	60,520
Eliminations	(958,699)	(1,303,739)	(1,535,322)	(101,612)	(126,323)	(162,128)
Consolidated	3,992,718	8,102,399	6,517,556	2,135,412	2,078,689	1,873,528

A dash means the company never published that figure on that basis, not that the value is zero. Logistics ceased to be a reported segment after the disposal. The FY2024 (c) column follows AR2024 Note 39; AR2025 Note 37 shows the same year with US\$1,397 thousand moved from Others into Mining.

FY2025 revenue variance, decomposed

The mining decline splits cleanly into price and volume because the company discloses both segment revenue and sales tonnage. Implied ASP fell from US\$205.22 to US\$153.88 per tonne, a decline of -25.0%, which we derive from the accounts and which matches the figure management states. The volume effect is measured at last year's price and the price effect at this year's volume, so the two sum to the reported movement without a residual.

Decomposition	US\$'000	Working
FY2024 external mining revenue	1,153,337	AR2025 Note 37
Volume effect	135,445	(6.28 – 5.62) Mt × US\$205.22/t
Price effect	(322,442)	(US\$153.88 – US\$205.22)/t × 6.28 Mt
FY2025 external mining revenue	966,340	Ties without a residual

Volume added US\$135mn and price removed US\$322mn, which is 2.4 times as much. Production grew 45% over two years and unit cash cost fell in both of them, and the company still recorded its weakest year of the five. Nothing management did to volume or cost could offset a 25% move in the price they sell at.

EBITDA under the two definitions in circulation

Reconciliation (US\$'000)	2023	2024	2025
EBIT + D&A (used for every multiple in this report)	988,947	938,949	771,799
add: share of joint-venture profit	52,059	32,599	15,857
add: forex and other reconciling items	13,994	14,452	11,344
Company-defined EBITDA (AR2025 p85)	1,055,000	986,000	799,000

The company defines EBITDA from profit for the year excluding D&A, tax, finance items and forex, which keeps joint-venture profit in and strips forex out. EBIT plus D&A does the opposite on both counts.
